

NEWS FOR OUR DISTRIBUTOR PARTNERS ISSUE NO. 1, MAY 2011

In this issue :

1. Altitude Formula
2. Temperature Adjustment

Product information

The following chart reflects the temperature adjustment required to compensate for higher altitudes :

Temperature Adjustment to Compensate for Altitude					
Altitude (Ft)	Altitude (M)	Temperature (°C)	(°C) Differential from 182 °C	Temperature (°F)	(°F)Differential from 360 °F
0	0	182	0	360	0
500	152	181	1	357	3
1000	305	179	3	354	6
1500	457	177	5	350	10
2000	610	174	8	346	14
2500	762	172	10	342	18
3000	914	170	12	338	22
3500	1067	167	15	334	26
4000	1219	164	18	327	33
4500	1372	161	21	322	38
5000	1524	157	25	315	45
6000	1829	154	28	310	50
7000	2134	147	35	298	62
8000	2438	141	41	286	74
9000	2743	136	46	274	86
10000	3048	128	54	262	98

NB : Because the temperature of solvents is lower at high elevations than at sea level, it takes longer to do a batch at higher altitudes than at sea level.
